

BIOGRAPHY

Anthony Halicki (B.S.)

Software Developer, Munro & Associates, Inc.

Anthony Halicki has been a software developer with Munro & Associates for over 5 years. During his time at Munro & Associates, he has been proud to help in the development of the Design Profit software and its support systems. Anthony has fixed bugs, added new features, given technical training & software demonstrations, provided customer technical support, and also expanded upon essential licensing systems. He was also privileged to be the lead programmer for the “*Affordability & Producibility Roadmap*” desktop application.

Prior to working with Design Profit, Anthony attended the University of Michigan in Flint where he obtained a Bachelor’s degree in Computer Science where he gained an array of knowledge and skills in areas such as web development, project management, and application development. He worked with common languages & technologies such as Java, Visual Basic, and SQL. His academic performance earned him the attention of his professors, and he was hired in his sophomore year to be an assistant teacher in some of the university’s web development courses. This enabled Anthony to hone his web development skills while also allowing him to help other struggling students in need of assistance.

In addition to technical skills, Anthony gained leadership & speaking skills by joining the university’s very first group of resident advisors when dorms were constructed during his senior year. Anthony held various meetings and events, and also enforced university policy within a large and diverse group of students. Anthony also had a side hobby of theatre, and has performed in over 10 plays. These experiences have helped Anthony become a very effective speaker and improve his ability to easily manage & interact with large groups of people. Anthony is a very animated presenter, and this helps to set him apart from many other computer scientists in his field.

Additionally, Anthony has a hobby of learning foreign culture (in particular, Japanese culture) and has taken approximately 1 year of courses allowing him to speak very basic Japanese. Anthony continues to immerse himself in this culture and plans to one day master the language as well as travel to Japan.

Mixing foreign culture with technology is something Anthony truly enjoys, and it enables him to diversify his skill set in a unique way. Continuing in his pursuit to master both foreign studies and computer science is a must for Anthony, and he is happy to be able to make his hobby a part of his career.
